

\*54.43.  $\vdash \therefore \alpha, \beta \in 1. \supset : \alpha \wedge \beta = \Lambda. \equiv . \alpha \vee \beta \in 2$

*Dem.*

$\vdash . *54.26. \supset \vdash \therefore \alpha = \iota'x. \beta = \iota'y. \supset : \alpha \vee \beta \in 2. \equiv . x \neq y.$   
[\*51.231]  $\equiv . \iota'x \wedge \iota'y = \Lambda.$   
[\*13.12]  $\equiv . \alpha \wedge \beta = \Lambda$  (1)

$\vdash . (1). *11.11.35. \supset$   
 $\vdash \therefore (\exists x, y). \alpha = \iota'x. \beta = \iota'y. \supset : \alpha \vee \beta \in 2. \equiv . \alpha \wedge \beta = \Lambda$  (2)

$\vdash . (2). *11.54. *52.1. \supset \vdash . \text{Prop}$

From this proposition it will follow, when arithmetical addition has been defined, that  $1 + 1 = 2$ .

# 15058: Intro to Proofs

$p \Rightarrow q$

# A Bit about Myself

Jonathan Whyte (refer to me by first name):

- Rising sophomore at MIT
- Kinda ugly but decent at proofs
- Major: Computer Science, Data Science, and Economics (6-14)
- Hobbies: Tennis, Rubik's Cubes
- Fun fact: I have a twin sister who also goes to MIT.

## Introduce Yourself

# What are Proofs?

- Wikipedia: an inferential argument for a mathematical statement, showing that the stated assumptions logically guarantee the conclusion.
- The reason that math is better than science

shutterstock.com • 1859813464

# Goals of This Class

By the end of this class you should be able to:

- Understand various general strategies for attempting proofs and have a sound understand of why they work
- Apply various proof methods to proofs of simple theorems
- Identify logical flaws in other proofs

# Few Things to Keep In Mind

- Practice makes perfect.
- Combine proof techniques.
- Proofs are Hard.
- Well-reasoned verbal argument = proof.
- Write out work.
- Feedback form.

# Tentative Class Schedule

Week 1	Implications: Proving them Directly and Indirectly
Week 2	Proof by Cases, Proof by Counter-Example, Proofs of Existence (Constructive vs Non-constructive Proofs), and Proofs of Uniqueness
Week 3	Induction: What an Absolute Unit!!!
Week 4	Choose Your Adventure
Week 5	Choose Your Adventure
Week 6	Choose Your Adventure

# Choose Your Adventure

Boolean Logic

Practice Session / Gameshow

Well Ordering / Strong Induction

## Mathematical Induction

$$3 + 7 + 11 \dots (4n-1) = n(2n+1)$$

$$1^3 + 2^3 + 3^3 + \dots + n^3 = \frac{n^2(n+1)^2}{4}$$

$$1 + 2 + 2^2 + \dots + 2^{n-1} = 2^n - 1$$

Predicate Logic

Combinatorial Proof

Set Theory

Let's Get Rolling!

# Implication

- If A, then B.
- B if A.
- If it rains, then I will not go biking.
- I will not go biking if it rains.

$$A \rightarrow B$$

# How to Prove Implications

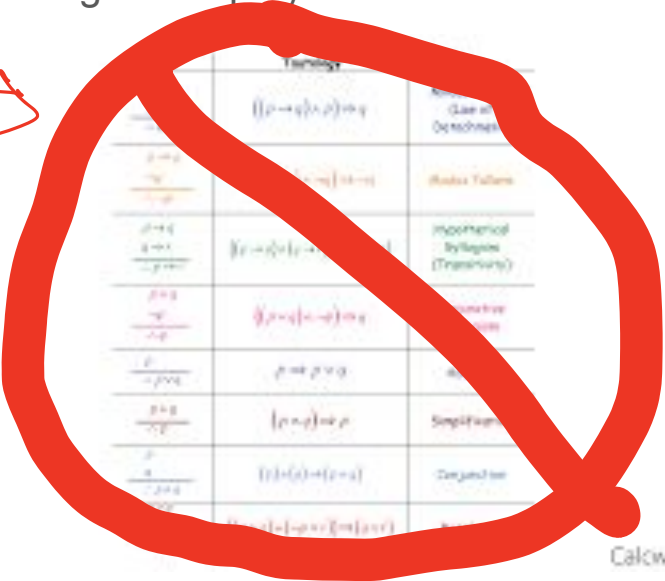

- Proof. Assume “if”, show “then.”

# Direct Proofs

- Prove something is true.
- Rules of Inference: logical steps you're allowed to take

Don't →  
Use

	Formulas	Rule Name
$\frac{p \rightarrow q, p}{q}$	$(p \rightarrow q) \wedge p \rightarrow q$	Modus Ponens
$\frac{p \rightarrow q, \neg q}{\neg p}$	$(p \rightarrow q) \wedge \neg q \rightarrow \neg p$	Modus Tollens
$\frac{p \rightarrow q, q \rightarrow r}{p \rightarrow r}$	$(p \rightarrow q) \wedge (q \rightarrow r) \rightarrow (p \rightarrow r)$	Implication Inference (Transitivity)
$\frac{p \wedge q}{p}$	$(p \wedge q) \rightarrow p$	Simplification
$\frac{p \wedge q}{q}$	$(p \wedge q) \rightarrow q$	Simplification
$\frac{p}{p \wedge q}$	$p \rightarrow p \wedge q$	Conjunction
$\frac{p, q}{p \wedge q}$	$(p \wedge q) \rightarrow p$	Conjunction
$\frac{p}{p \vee q}$	$p \rightarrow p \vee q$	Disjunction
$\frac{p, q}{p \vee q}$	$(p \vee q) \rightarrow p \vee q$	Disjunction

Just Use Logic

Explicitly state assumption & what we want to prove.

$$a + 5 = 7 \text{ if } a = 2$$

Proof. Assume  $a = 2$ . Show  $a + 5 = 7$ .

$$a = 2 \quad (\text{Assumption})$$

$$a + 5 = 2 + 5 \quad (\text{Add 5 to both sides})$$

$$a + 5 = 7 \quad (2 + 5 = 7)$$

$\Rightarrow$  delimiter; says you're ending proof

Let's say the following:

- If
- (1) "It is not sunny this afternoon and it is colder than yesterday"
  - (2) "We will go swimming ~~and~~ it is sunny"
  - (3) "If we do not go swimming, then we will take a canoe trip"
  - (4) "If we take a canoe trip, then we will be home by sunset"
  - (5) Prove that we will be home by sunset
- Assumptions
- what we want to prove

Proof. Assume (1)-(4). Show (5).

Since it is not sunny (1), then we won't go swimming, since if we will then it would be

Sunny by (2). By (3), We don't go swimming  
so we take a canoe ride home. By (4), we  
take a canoe trip so we will be home by  
Sunset.

# If and Only If Statement

$$A \text{ iff } B = A \rightarrow B \text{ and } B \rightarrow A$$

- A if and only if B
- A iff B
- $A = B$
- If A then B, and if B then A.

$$A \leftrightarrow B$$

## Proving Iffs

- Prove A iff B by proving if A then B and if B then A.

Since A happens exactly when B happens,  
if A happens then B happens and vice versa.

$$a + 5 = 7 \text{ iff } a = 2$$

Proof. Show  $a + 5 = 7 \rightarrow a = 2$  and  
 $a = 2 \rightarrow a + 5 = 7$ .

$$a + 5 = 7 \rightarrow a = 2 \quad (\rightarrow):$$

Assume  $a + 5 = 7$ . Show  $a = 2$

$$a + 5 = 7 \quad (\text{Assumption})$$

$$a + 5 - 5 = 7 - 5 \quad (\text{Subtract 5 from both sides})$$

$$a = 2 \quad (5-5=0; 7-5)=2$$

$$a=2 \rightarrow a+5=7 \quad (\leftarrow):$$

Refer to previous proof.

# Indirect Proof

- Prove something cannot be false.

# Contrapositive

- Statement: If A, then B.
- Contrapositive: If not B, then not A.  $\Rightarrow$  negate and flip
- Contrapositive = Statement

# Proof by Contraposition / *Contrapositive*

- State the contrapositive, then prove it.

For all integers  $n$ ,  $n^2$  is even,  $n$  is even.

Proof. Prove the contrapositive: if  $n$  is not even, then  $n^2$  is not even.  $\iff$  if  $n$  is odd, then  $n^2$  is odd.

Assume  $n$  is odd. Show  $n^2$  is odd.

$n$  is odd  $\implies n = 2m + 1$  for some integer  $m$

$$n^2 = (2m + 1)^2 = 4m^2 + 4m + 1 = 2(2m^2 + 2m) + 1$$

Since  $2m^2 + 2m$  is an integer,  $2(2m^2 + 2m)$  is even and 1 more than that is odd.  $n^2$  is odd. 

# Proof by Contradiction

- Assume a statement you want to show is false. Make logical deductions to reach a clearly false statement.

For all integers  $n$ , if  $n^2$  is even,  $n$  is even.

Proof. Assume  $n^2$  is even. Show  $n$  is even.

Assume  $n$  is odd for contradiction.

$n$  is odd  $\rightarrow n = 2m+1$  for some integer  $m$ ,

$n^2 = 2(2m^2+2m)+1 \rightarrow n^2$  is odd. But

we assumed  $n^2$  is even. That creates a

contradiction,  $n$  must be even.  $\square$

Proving Irrationality Prove  $\sqrt{2}$  is irrational.

Proof. Assume  $\sqrt{2}$  is rational for contradiction.

rational  $\Rightarrow \sqrt{2} = \frac{a}{b}$ . Let  $g$  be greatest common

factor of  $a$  and  $b$ . Let  $m = \frac{a}{g}$  and  $n = \frac{b}{g}$

$m$  and  $n$  are integers, and  $\frac{m}{n} = \frac{a/g}{b/g} = \frac{a}{b} = \sqrt{2}$ .

$m$  and  $n$  have greatest common factor of 1.

$$\sqrt{2} = \frac{m}{n}$$

$$2 = \frac{m^2}{n^2}$$

Proved before

$$m^2 = 2n^2 \rightarrow m^2 \text{ is even} \rightarrow m \text{ is even} \rightarrow m = 2i$$

for some int  $i$

$$(2i)^2 = 2n^2$$

$$4i^2 = 2n^2$$

$$n^2 = 2i^2 \rightarrow n^2 \text{ is even} \rightarrow n \text{ is even}$$

$2$  divides  $m$  and  $2$  divides  $n$ , but we asserted that  $m$  and  $n$  have greatest common factors of  $1$ . This is a contradiction.  $\sqrt{2}$  must be irrational.

# Tips for Collaborative Problem-Solving

- **Problem-Solving (If you're stuck):**
  - Try all ideas on paper before discarding them.
  - Play around with numbers.
  - Draw pictures.
  - Try moving on to a different question and coming back to it.
- **Collaboration:**
  - Work together.
  - Make sure everybody understands a problem before moving on to the next one.
  - Be respectful of everybody's ideas.
